

- Slows down an attacker from brute forcing/credential stuffing
- Frees up your site resources
- Bonus steps
 - Ensure the plugin you're using takes into account XMLRPC

#5: Limit Login Attempts

- What
 - Locks an account or blocks an IP address after so many failed attempts
- Why/How does it reduce risk?
 - Slows down an attacker from brute forcing/credential stuffing
 - Frees up your site resources
- Bonus points
 - Ensure the method you're using takes into account XMLRPC

#5: Default Credentials
