

#6: File/Directory Permissions

- Bonus points
 - Lock down all area of WordPress to read-only except for those areas that specifically require the ability to write
 - Ideally, only the wp-content/uploads directory is writable, and then only writeable by the php process
 - If your environment allows it, set files to only readable (0400) by the owner of the process that php runs under

#6: Remove Unused Themes/Plugins/Users
