What is "Risk"?

- Risk is the intersection of assets, threats, and vulnerabilities.

- Asset

  - People, Property, Information

  - An asset is what we are trying to protect

- Threat

  - Anything that that represents a potential danger to an asset, whether deliberately or by accident

  - A threat is what we're trying to protect against

- Vulnerability

  - Weakness or holes/gaps in security procedures or program that can be exploited by a threat to affect assets
